UNDERSTANDING THE BENCHMARK COMPARISONS

COMPARISON DATA

NRC's database of comparative resident opinion is comprised of resident perspectives gathered in citizen surveys from approximately 500 jurisdictions whose residents evaluated local government services and gave their opinion about the quality of community life. The comparison evaluations are from the most recent survey completed in each jurisdiction; most communities conduct surveys every year or in alternating years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant.

The jurisdictions in the database represent a wide geographic and population range as shown in the table below.

Jurisdiction Characteristic	Percent of Jurisdictions
Region	
West Coast ¹	16%
West ²	20%
North Central West ³	10%
North Central East ⁴	13%
South Central ⁵	7%
South ⁶	26%
Northeast West ⁷	3%
Northeast East ⁸	4%
Population	
Less than 40,000	45%
40,000 to 74,999	20%
75,000 to 149,000	17%
150,000 or more	19%

PUTTING EVALUATIONS ONTO THE 100-POINT SCALE

Although responses to many of the evaluative questions were made on a four point scale with 1 representing the best rating and 4 the worst, the benchmarks are reported on a common scale where 0 is the worst possible rating and 100 is the best possible rating. The 95 percent confidence interval around an average score on the 100-point scale is no greater than plus or minus four points based on all respondents.

The 100-point scale is not a percent. It is a conversion of responses to an average rating. Each response option is assigned a value that is used in calculating the average score. For example, “excellent” = 100, “good” = 67, “fair” = 33 and “poor” = 0. If everyone reported “excellent,” then the average rating would be 100 on the 100-point scale. Likewise, if all respondents gave a “poor,” the result would be 0 on the 100-point scale. If half the respondents gave a score of “excellent” and half gave a score of “poor,” the average would be in the middle of the scale (like the center post of a teeter totter) between “fair” and “good.” An example of how to convert survey frequencies into an average rating appears below.

Example of Converting Responses to the 100-point Scale

How do you rate the community as a place to live?						
Response option	Total with “don’t know”	Step 1: Remove the percent of “don’t know” responses	Total without “don’t know”	Step 2: Assign scale values	Step 3: Multiply the percent by the scale value	Step 4: Sum to calculate the average rating
Excellent	36%	= 36 ÷ (100-5) =	38%	100	= 38% x 100 =	38
Good	42%	= 42 ÷ (100-5) =	44%	67	= 44% x 67 =	30
Fair	12%	= 12 ÷ (100-5) =	13%	33	= 13% x 33 =	4
Poor	5%	= 5 ÷ (100-5) =	5%	0	= 5% x 0 =	0
Don’t know	5%		–			
Total	100%		100%			72

INTERPRETING THE RESULTS

Average ratings are compared when similar questions are included in NRC's database, and there are at least five jurisdictions in which the question was asked. Where comparisons are available, three numbers are provided in the table. The first column is your jurisdiction's rating on the 100-point scale. The second column is the rank assigned to your jurisdiction's rating among jurisdictions where a similar question was asked. The third column is the number of jurisdictions that asked a similar question. The final column shows the comparison of your jurisdiction's average rating to the benchmark.

Where comparisons for quality ratings were available, the City of Oakland Park's results were generally noted as being "above" the benchmark, "below" the benchmark or "similar" to the benchmark. For some questions – those related to resident behavior, circumstance or to a local problem – the comparison to the benchmark is designated as "more," "similar" or "less" (for example, the percent of crime victims, residents visiting a park or residents identifying code enforcement as a problem.) In instances where ratings are considerably higher or lower than the benchmark, these ratings have been further demarcated by the attribute of "much," (for example, "much less" or "much above"). These labels come from a statistical comparison of the City of Oakland Park's rating to the benchmark where a rating is considered "similar" if it is within the margin of error; "above," "below," "more" or "less" if the difference between your jurisdiction's rating and the benchmark is greater the margin of error; and "much above," "much below," "much more" or "much less" if the difference between your jurisdiction's rating and the benchmark is more than twice the margin of error.

This report contains benchmarks at the national level.
